Adly Moto 300-XS

# The 300-XS and 300-AS:

Adly Moto, in Dallas, Texas, is excited to announce that two of its most exciting ATVs ever produced will be arriving at their warehouse this spring. Manufactured in Taiwan, these two ATVs represent the latest in state-of-the-art frame/chassis and metallurgical developments that have been seen on an ATV.

The 300-XS is an awesome machine with an air-cooled, 4-valve motor that features a 5-speed transmission with reverse. While the motor's performance alone is something that needs to be experienced, many of the innovations have been reserved for the frame and chassis. The frame features a new-design round tubing which has been increased to 3 millimeter in thickness, which is also the thickness of the relative frame brackets.

The frame is a simple geometric design which actually allows for about 20 percent more rigidity. The streamline shape of the frame makes for a more flexible body design, better alignment and greater ease of maintenance.

The steering system features an increased positive caster which results in more agility and better steering and handling. Also helping in that department is an ideal weight distribution ratio of 45:55. These innovations, coupled with longer a-arms, five way pre-load adjustable shocks result in one of the fastest, best handling, awesome jumping 300

sport quads ever produced!

The 300-XS's instrument cluster is a digital array which features a speedometer, odometer, hour meter, RPM meter, clock

and fuel gauge - all background lit with an LED. Not to be overlooked are little extras like a locking gas cap, locking storage compartments on the front fenders and fully enclosed footrests.

The 300-AS is a fully automatic, liquid-cooled version of the 300-XS. It features a 272cc 4-valve, liquid-cooled engine. It features the same instrumentation as the 300-XS, along with the locking gas cap, locking storage compartments and fully enclosed foot rests.

The 300-AS has some very unique features to it, such as:

- A ceramic cylinder-which performs better by decreasing wear while it's heat-transfer capabilities increases the durability of the cylinder;

- Locking steering column;
- Roller bearing tappets; and
- It utilizes a needle bearing to tremendously reduce power loss between the shaft and rocker arm.

Adly Moto has spent a lot of R&D time and money in designing these two excellent quads. The performance is on par with the best the market has to offer. And when it comes to support, all Adly Moto ATVs come with a one-year, parts and labor warranty. Adly Moto and its parent factory in Taiwan have been producing extremely high-quality and exciting power sports products since the 1970's. □
